

# → BeFREE

Tipro's BeFREE is a new module in development. BeFREE is an integration of a PC and a touch-screen, based on the existing FREE line, so compatible with all existing and future modules. The BeFREE offers full connectivity in a very compact form. A special low heat producing processor is used, which is powerful enough for most tasks (except gaming and server applications). BeFREE is built in the housing of the original 15" FREE. It consists of motherboard, hard disk, DC-DC converter, touchscreen and Tipro controller.

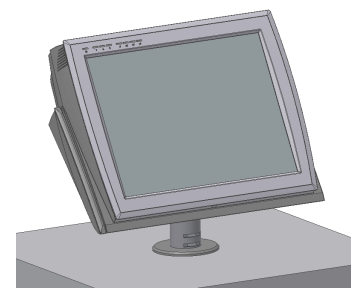

*Available from April 2006*

## → Features

- : 1 Ghz powerful, but low heat processor
- : Industrial grade mainboard, designed to run 24/7
- : Extensive connectivity:
  - 3 x powered COM, 5 / 12 / 24V
  - 3 x powered USB, 2 x 12V, 1 x 24V
  - 2 x USB
- : Industrial grade high brightness TFT
- : Low noise
- : Easy-access serviceability
  
- : 512 MB RAM
- : 40 GB HDD
- : Resistive touchscreen (Elo)
- : PCMCIA expansion
- : Flash card slot (CFII)
- : Supports secondary VGA display, independent from main screen
- : LAN 10/100
- : Tipro external bus
- : 2 x RJ12 for cash drawer
- : Audio connectors
- : External power supply

Cable management - no connectors on the outside.

Cables can be hidden, for instance when using pole mounting.
