

Operating system updates are vital to an enterprise's digital safety and cyber security. While consumer devices OS updates normally end after 3 years, unitech is proud to offer, for free, extended years of security support to all models described on this page. We guarantee to supply to you for our \*GMS and \*AER certified mobile devices regular free security patch updates, and then guarantee 3 more years of free critical up-to-date support. These free updates are easy to install by pulling over-the-air updates or pushing the updates via device management software such as Unitech MoboLink.

### unitech Shield is the long-term plan to support security patch updates

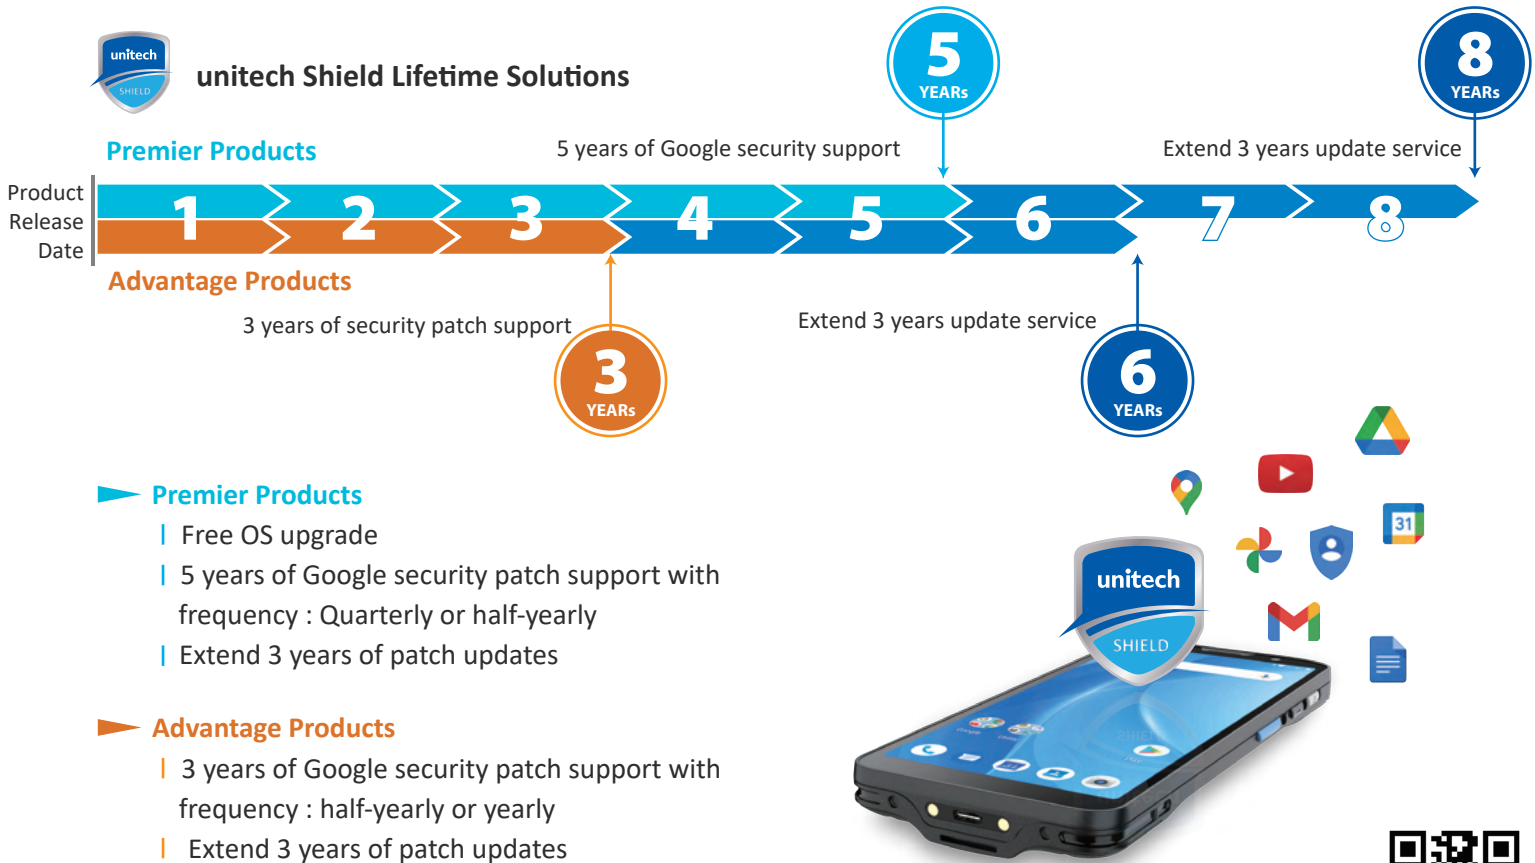

unitech categorizes our Android mobile computers into two groups:

1. Advantage products (3yrs+3yrs)
2. Premier products (5yrs+3yrs)

In the first 5 years for Premier products, or 3 years for Advantage products, unitech will update the security patches at the frequency shown in the chart below.

During the following 3 years, called Shield Value-Added Service years, unitech will supply updates that include critical security patches only, not new features or design change requests. unitech will quickly prepare and make available OS patches once Google or, depending on the product platform, Qualcomm or MTK, supply the critical fix.

Furthermore, unitech also supplies, for free, planned OS upgrades of Premier products. For example, unitech supplies for free the upgrade of the HT730 from Android 10 to Android 12.
